- Iteration 1 activities consisted of team creation, reviewing clients request for a new system, exploring the present system to identify all the
- Iteration 2 activities consisted of team creation, reviewing clients request in a few system, exploring the present system to identify all the features that are present, and identifying problems that exist in reference to what the client is requesting. (3 weeks)

 Iteration 2 activities consisted of determining a list of system requirements that are necessary to accomplish what the client is requesting, determining all of the operations that would be necessary to support the requirements, and prototyping the physical network and layout of the proposed system. These activities were then combined to form the system proposal that was presented to the client. (3 weeks)

 Iteration 3 activities focused on the diagrams that will show the flow of each process as well as more prototypes of the components of the
- system. (2 weeks)
- Iteration 4 activities were presented as Assignment 3. They included a finalized list of use-cases with a use-case diagram, prototypes for each use-case, and a class and sequence diagram for each functional use-case. (2 weeks)
 Iteration 5 activities consist of a consolidated class diagram for the system, data design and data definition tables dor the records to be used, user interface navigation diagrams and screen layouts for the data collection forms and the sequences to find them, an updated Gantt chart, and refined prototypes for all use-cases.
- Elaboration Specificatiion activities focused on refining, combining, and finalizing all aspects of the project. (2 weeks)

		Start	Finish	Duration	Aug 2021 Sep 2021
